

SUPER INTELLIGENCE

SUPER SMART BLACK TECHNOLOGY

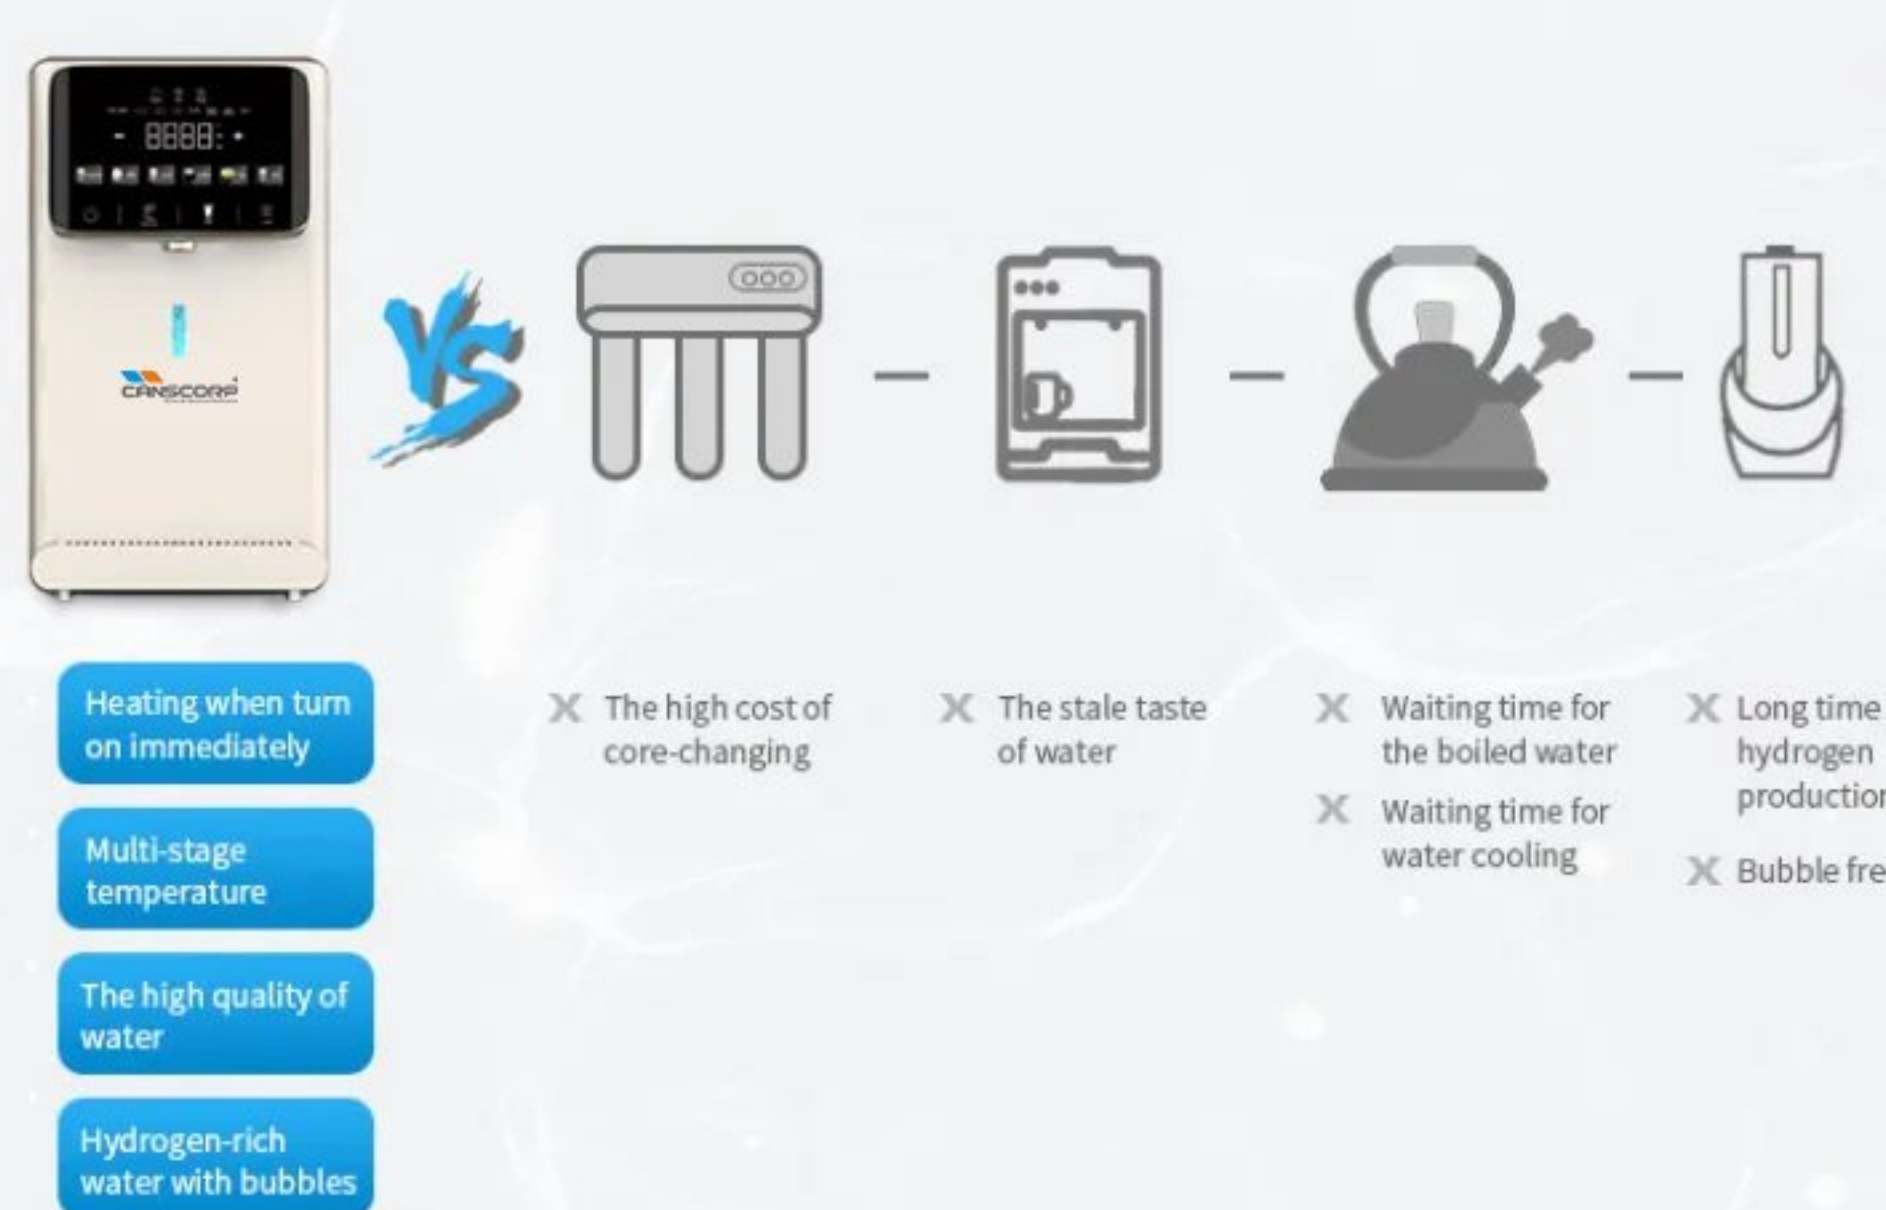

Hydrogen-rich cooling, heating and drinking in one step

Reverse Osmosis Water Purification and Dispensing Machine W22 Standard Edition

ONE MACHINE WITH SEVERAL FUNCTIONS UPGRADING NEW WAYS TO DRINK WATER

Setting the filtration, heating and cooling, hydrogen-rich water as one. This machine fuses the filter of water purifier, heating and cooling of water dispenser and hydrogen production of hydrogen-rich water purifier. The body is small, powerful, does not need to install, and can move as you like.

THE WATER QUALITY IS SAFER

- ▲ 6L raw water tank, 2.5L waste water tank
- ▲ Super-large water tank, high waste water ratio
- ▲ 200G high flux RO membran
- ▲ Water production capacity: 500ml/min, water supplying is greater than water output, sustainable and continuous water supplying
- ▲ 2.5L built-in pure water tank
- ▲ Advanced water caching, no waiting for getting the water

INTELLIGENT LIFE ENJOYMENT

- ▲ Hydrogen-rich water with bubbles
- ▲ SPC electrolysis technology can rapidly electrolysis water into hydrogen-rich water so that water evenly encapsulates hydrogen molecules, and hydrogen and water form a stable combination, resulting in high concentration of hydrogen-rich water with bubbles
- ▲ Ice water-making
- ▲ Semiconductor cooling technology, low to 10 degrees which endows the water with good taste

OVERFLOW INSTANT ELECTROLYSIS HYDROGEN PRODUCTION MODULE

Imported proton exchange membrane, supplemented by Pt platinum solid electrolyte on both sides, realizes the separation of hydrogen and oxygen. The hydrogen production is stable, the gas volume is sufficient, the purity is high, and the service life is long.

SPE ELECTROLYSIS HYDROGEN PRODUCTION TECHNOLOGY 4.0

Hydrogen production technology does not stop upgrading.

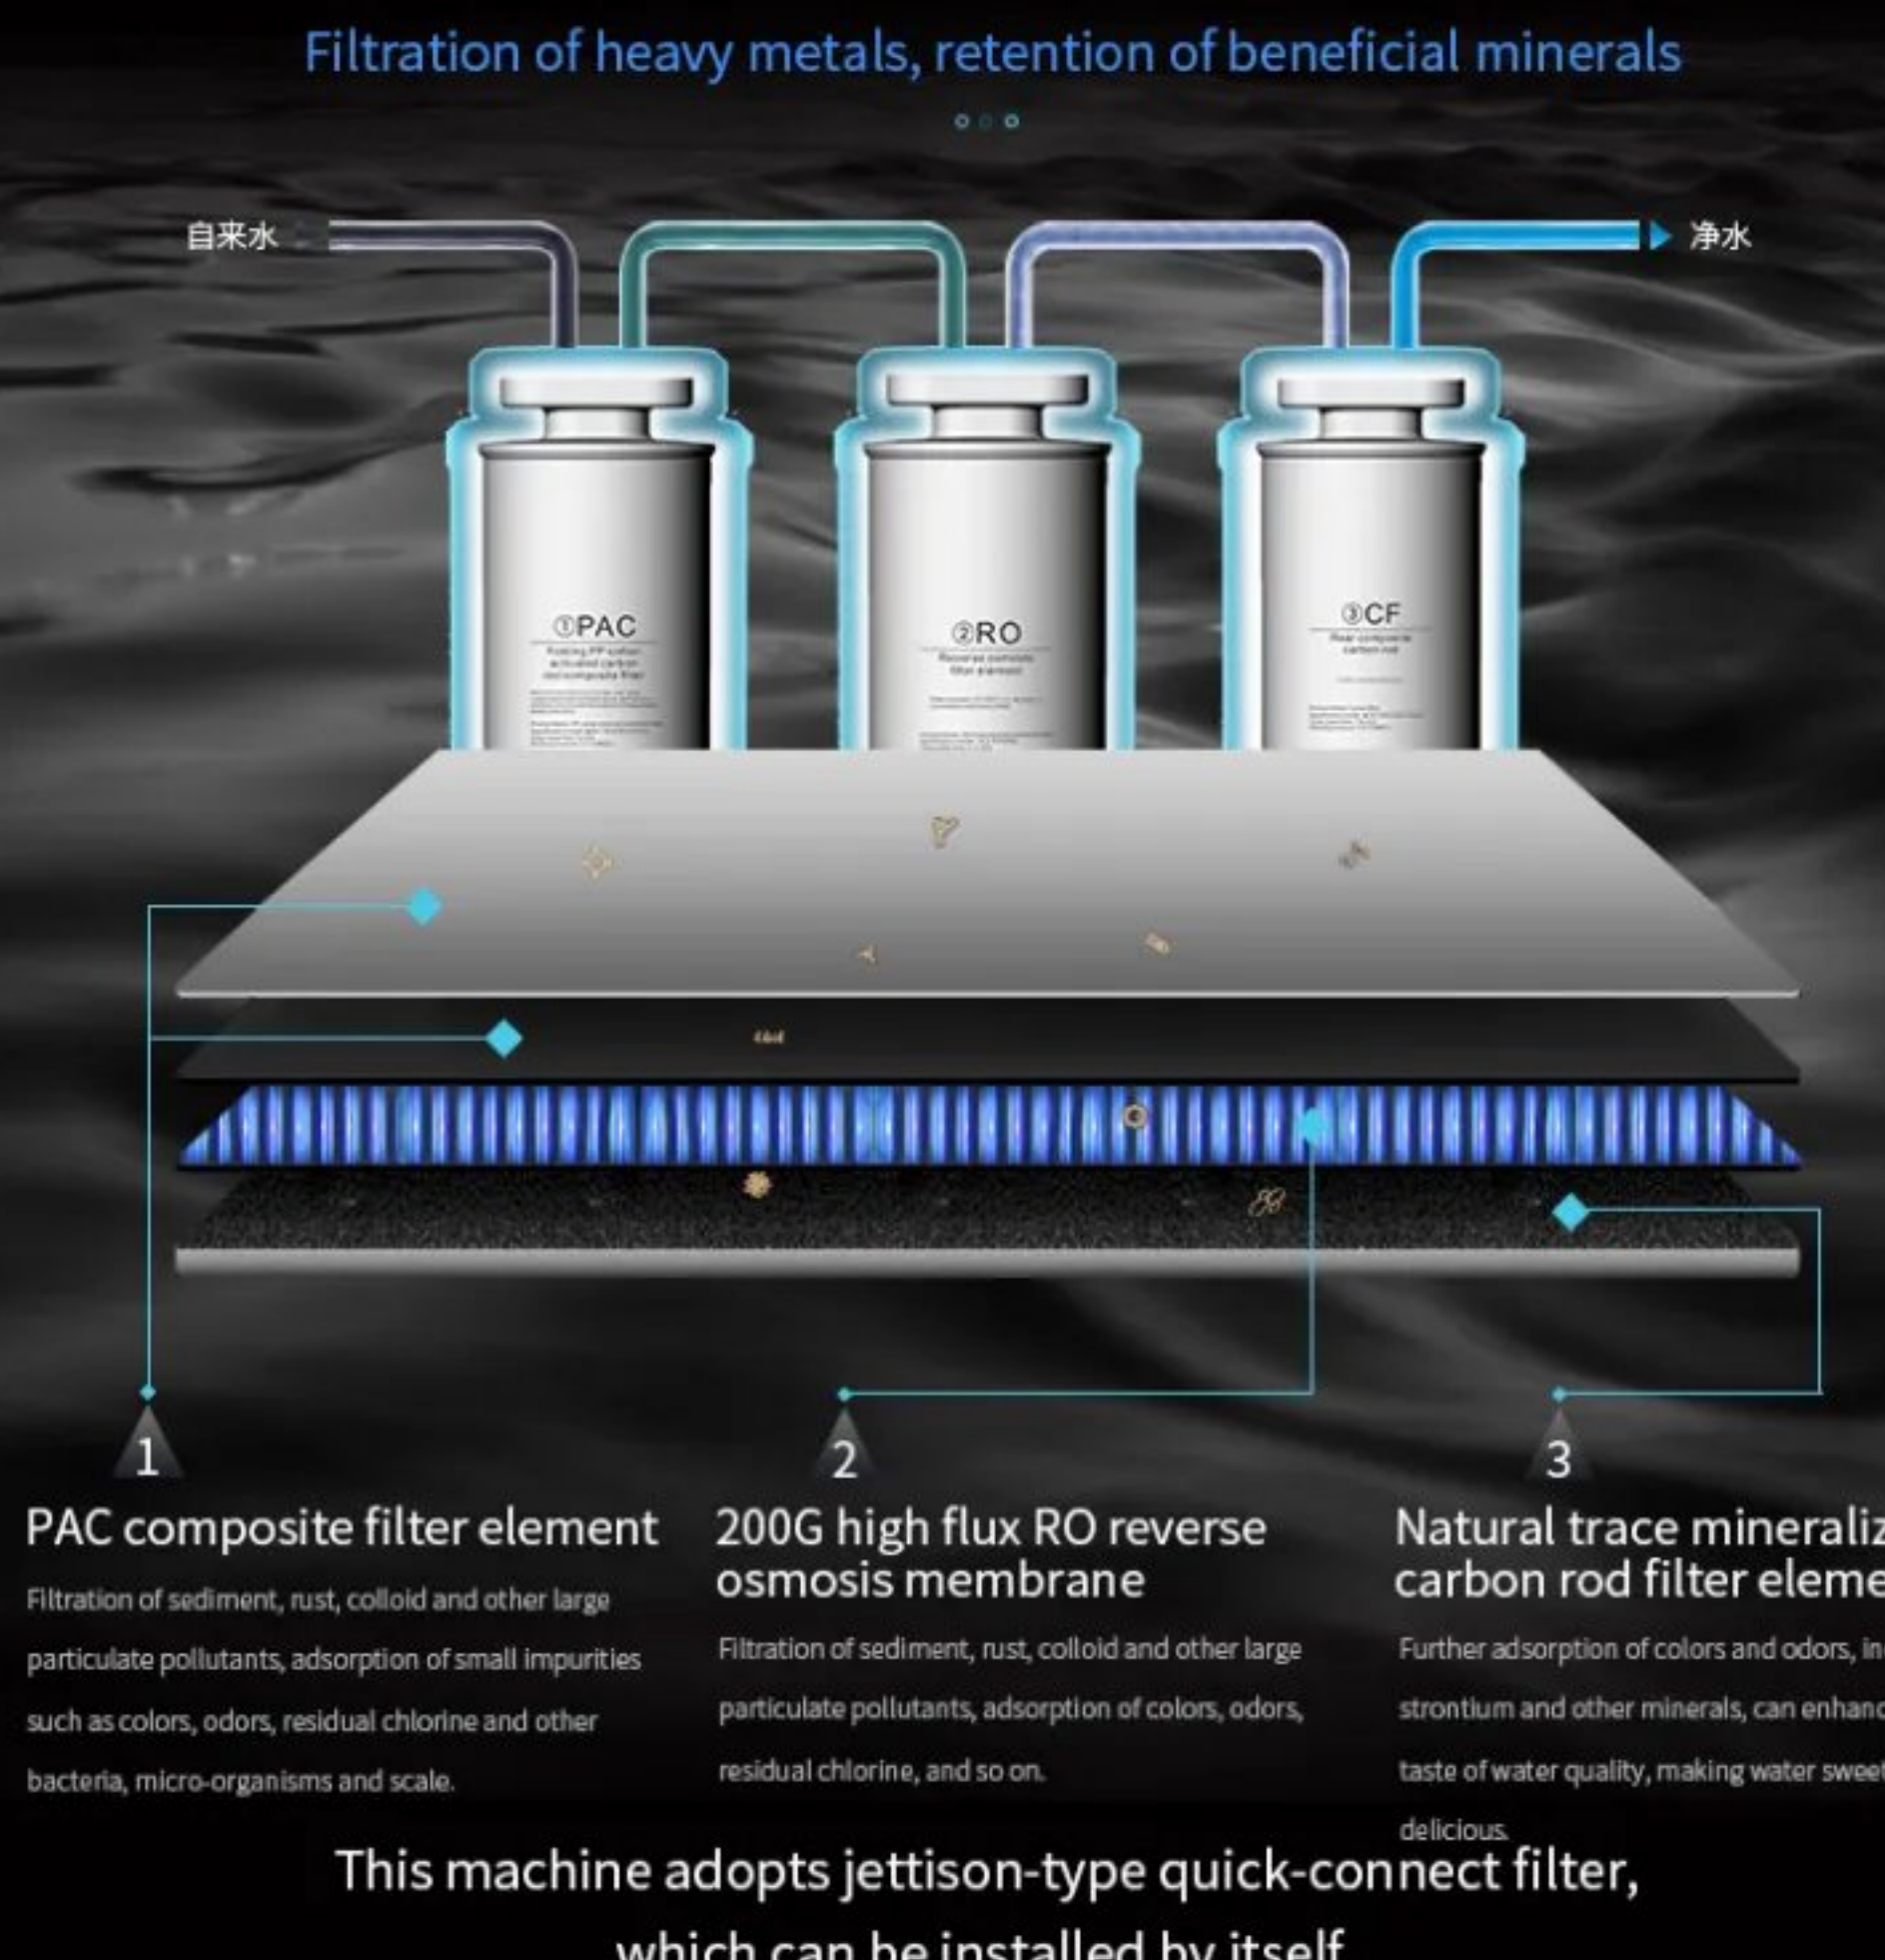

THREE ADVANTAGES

- ▲ 3-SECOND FAST HEATING
- ▲ Thick film technology, boiling water will only need 3 seconds, and water presents much higher quality after thousand boiling water is avoided.
- ▲ 4-LAYER PURIFICATION
- ▲ 3-grade filter element, 4-layer purification: Aerospace reverse osmosis filtration technology, strontium-rich mineralized filter element, carbon composite filter element.
- ▲ 6-STAGE TEMPERATURE CONTROL
- ▲ Making normal temperature water, warm water, milk, brewing coffee, green tea, and boiling water.

MULTI-STAGE WATER TEMPERATURE, HOT AND COLD, MEET YOUR NEEDS AT ANY TIME

- ▲ Explosion-proof stainless steel core - Heat quickly penetrates each water molecule
- ▲ 3rd generation rare earth 3-second rapid heating technology
- ▲ Semiconductor refrigeration technology, good taste as low as 10 degrees

FILTRATION OF HEAVY METALS, RETENTION OF BENEFICIAL MINERALS

Level 1:

PAC composite filter element

Filter material: Polypropylene folding fiber PP cotton + carbon rod

- ① Intercepting large particles of sediment, rust suspended solids and other impurities in water.
- ② Removal of residual chlorine, odor, colors, etc.

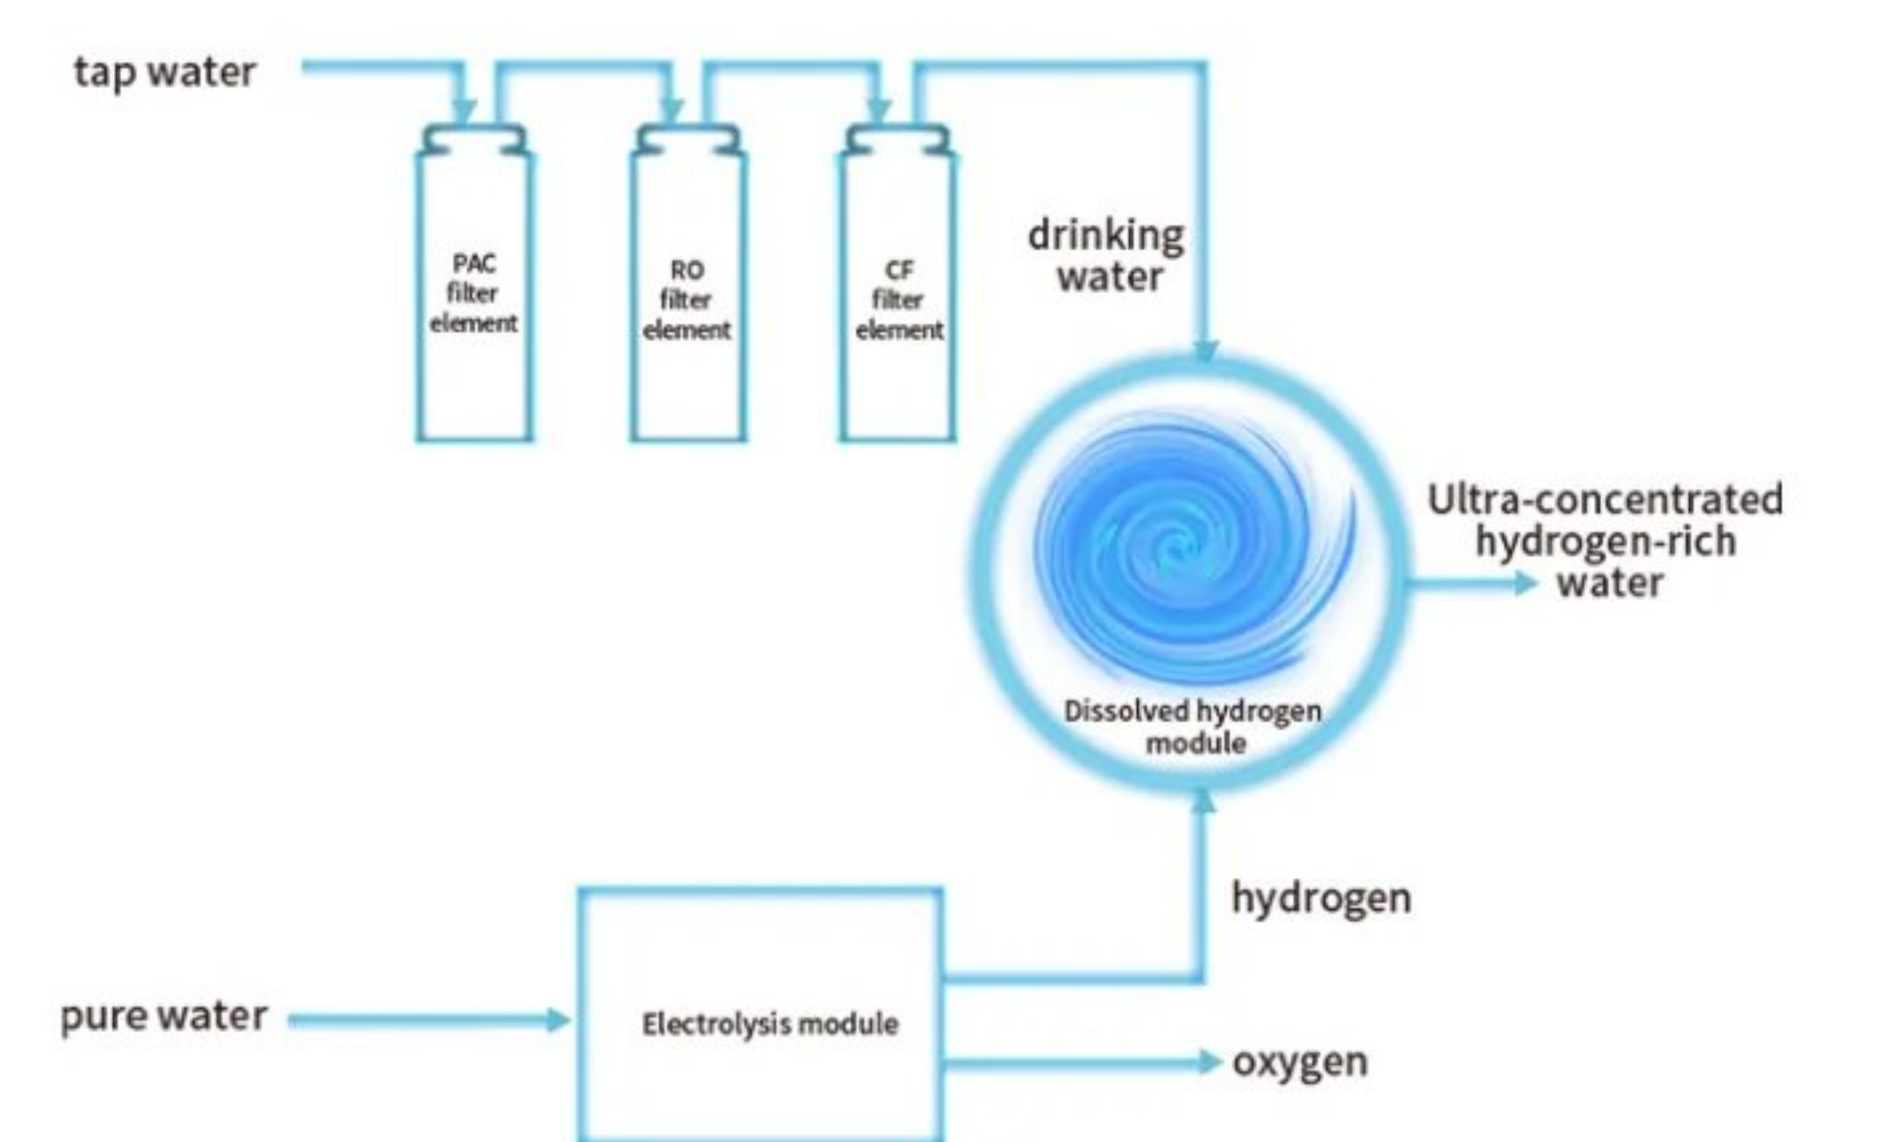

6-12 months

Recommended replacement cycle

Physical Dissolved Hydrogen Ultra-Concentrated Hydrogen-Rich Water Technology

The world's leading technology, the pure water is electrolyzed to generate hydrogen through an independent electrolysis module, and the hydrogen and drinking water are quickly mixed and pressurized through the water-vapor mixing system, so that the hydrogen is instantly dissolved into the drinking water to generate ultra-high concentration hydrogen-rich water

6-stage temperature control adjustable

Control the temperature of each stage to easily meet different tea needs

3-second instant heating

Refuse to wait long, not run for water

First filter and then boil the water, dripping fresh and pure

- ▲ Explosion-proof stainless steel core
- ▲ Heat penetrates each water molecule rapidly
- ▲ The third-generation rare earth 3-second rapid heating technology realizes 3-second rapid heating
- ▲ Compared with traditional heating, the water quality is fresh, and repeated heating is avoided

Compared with quartz tube technology, thick film technology improves its shortcomings of poor stability and high defect rate.

Level 2:

RO membrane (200G high flux)

Using high-tech space RO technology theoretically assists in purifying the impurity down to 0.0001 microns, and filtering out the bacteria, chemical pesticide residues, radioactive particles, residual chlorine, microorganisms, organic substances and other harmful substances.

12-24 months

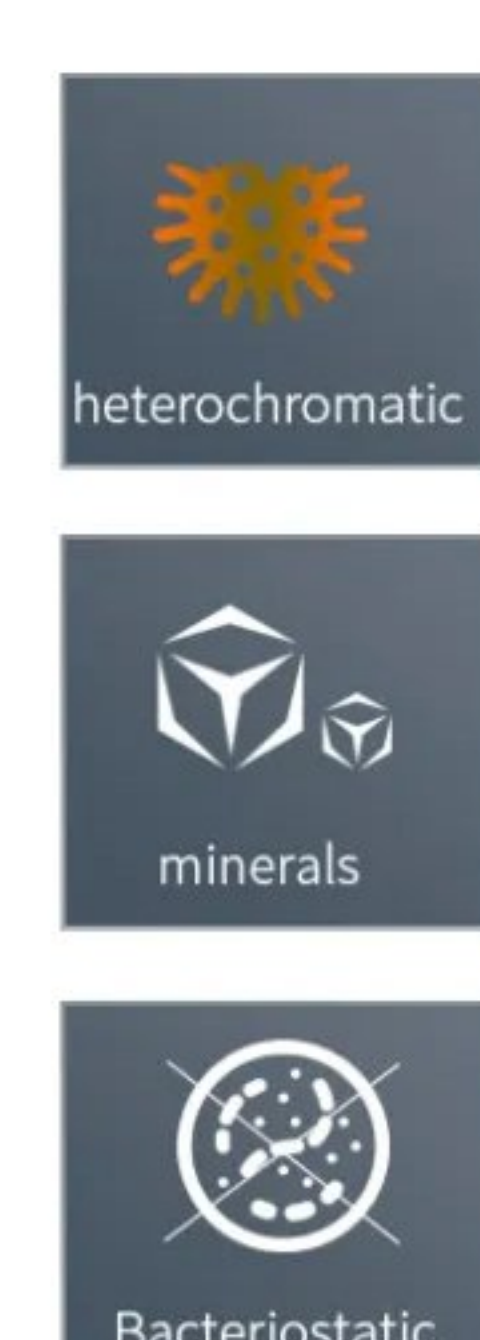

Recommended replacement cycle

Level 3:

Natural micro-mineralized carbon rod filter

Water quality characteristics: Green and environmental protection, no secondary pollution, no heavy metals exceeding the standard; Slightly alkaline, the pH value can be stabilized between 7.0 and 8.5, maintaining a weak alkaline; It is rich in trace elements such as potassium, sodium, calcium and magnesium, and it is still mineralized after 15 months of continuous use.

6-12 months

Recommended replacement cycle
